

Elite Restroom Rentals

Electrical and Water

The Comfort Elite III station requires electrical power from a standard outdoor electrical power outlet. The flushing system requires water from a standard hose fitting to city water. Both outlets must be accessible within 100 feet of the set-up site.

The Unit comes equipped with hose and extension cord to meet these requirements.

In the event that the station will be used in an area that does not have access to electricity, a generator may be leased for \$150/day. The generator runs on gasoline. The lessee has the option to buy and provide your own fuel for the generator, or have Elite Restroom Rentals provide this service. If we provide the fuel to run the generator, you will only be billed the cost of the actual fuel used, based on the price paid the day of rental.

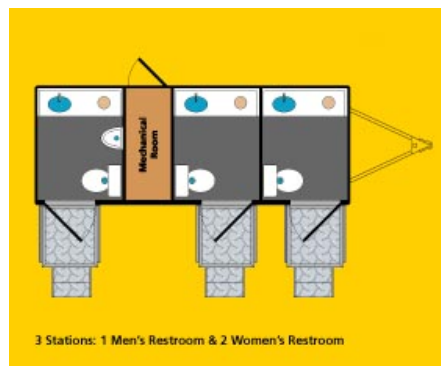

Waste Disposal

One pump service (waste tank emptying) is included. This covers 1,300 flushes. If your event requires additional waste pumping, a fee of \$200.00 will be charged for each pumping.

For long-term rentals, lessee has the option to connect the station to a septic system. This requires a 3-inch connection, not a 2-inch. Elite Restroom Rentals must inspect system prior to connection, and we must have access to the station to make the periodic inspections of the septic system.

Delivery & Set-Up

Delivery and set up is free within the DFW Metroplex (Dallas, Tarrant, Denton, Collin counties). For locations beyond there is an up-charge of \$1.40 per mile. This is negotiable based on type of event and availability of our station.
